

Highlights

Primary investment objective is to seek to provide long-term total return, which includes income and capital appreciation, while considering capital preservation.

Short-term: seeks positive absolute returns in a 36-month period.

Long-term: seeks positive real returns (outperform inflation plus 200 basis points) over five-year period and competitive returns versus bond market universe.

- **Bottom-up, benchmark indifferent.**
- **Invest a minimum of 25% of net assets in securities rated A- and above (high quality segment).**
- **Opportunistic allocation (up to 75% of net assets) to credit sensitive securities rated BBB+ and below (credit sensitive segment).**
- **Cash allocation is a residual of investment opportunities.**

CPI + 200	4.94	7.44	4.64	2.85

² Fund performance is net of all fees and expenses and includes the reinvestment of distributions. Periods greater than one year are annualized. Fund returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or the redemption of Fund shares, which would lower these figures.

[^] The Total Annual Fund Operating Expenses before reimbursement is 0.77% for the Institutional Share Class and 0.87% for the Advisor Share Class (as of most recent prospectus). First Pacific Advisors, LP (the "Adviser" or "FPA"), the Fund's investment adviser, has contractually agreed to reimburse the Fund for Total Annual Fund Operating Expenses (excluding interest, taxes, brokerage fees and commissions payable by the Fund in connection with the purchase or sale of portfolio securities, redemption liquidity service expenses, and extraordinary expenses, including litigation expenses not incurred in the Fund's ordinary course of business) in excess of 0.49% of the average net assets of the Fund attributable to the Institutional Class and 0.59% of the average net assets of the Fund attributable to the Advisor Class for the period ending April 30, 2022, and in excess of 0.59% of the average net assets of the Fund attributable to the Institutional Class and 0.69% of the average net assets of the Fund attributable to the Advisor Class for the one-year period ending April 30, 2023. During the term of the current expense limit agreement, beginning April 16, 2021 and ending April 30, 2023, any expenses reimbursed to the Fund by FPA during any of the 2 previous 36 months may be recouped by FPA, provided the Fund's Total Annual Fund Operating Expenses do not exceed the then-applicable expense limit. Beginning May 1, 2023, any expenses reimbursed to the Fund by FPA during any of the previous 36 months may be recouped by FPA, provided the Fund's Total Annual Fund Operating Expenses do not exceed 0.64% of the average net assets of the Fund attributable to the Institutional Class and 0.74% of the average net assets of the Fund attributable to the Advisor Class for any subsequent calendar year, regardless of whether there is a then-effective higher expense limit. This agreement may only be terminated earlier by the Fund's Board of Trustees (the "Board") or upon termination of the Advisory Agreement.

Past performance is no guarantee of future results and current performance may be higher or lower than the performance shown. This data represents past performance and investors should understand that investment returns and principal values fluctuate, so that when you redeem your investment it may be worth more or less than its original cost. Current month-end performance data, which may be lower or higher than the performance data quoted, may be obtained by calling toll-free, 1-800-982-4372.

Not authorized for distribution unless preceded or accompanied by a current prospectus. You should consider the Fund's investment objectives, risks, and charges and expenses carefully before you invest. The Prospectus details the Fund's objective and policies, charges, and other matters of interest to a prospective investor. Please read the Prospectus carefully before investing.

The Net Asset Value (NAV) is the market value of one share of the Fund. The NAV is calculated by subtracting the Fund's liabilities from the value of the Fund's total assets and dividing by the number of the Fund's outstanding shares.

The Bloomberg Barclays U.S. Universal Bond Index represents the union of the following Bloomberg Barclays' indices: U.S. Aggregate Index, U.S. High-Yield Corporate Index, 144A Index, Eurodollar Index, Emerging Markets Index and non-ERISA portion of the CMBS Index. Municipal debt, private placements, and non-dollar-denominated issues are excluded from the Universal Index. The only constituent of the index that includes floating-rate debt is the Emerging Markets Index. The CPI + 200 Basis Points is created by adding 2% to the annual percentage change in the Consumer Price Index ("CPI"). The Consumer Price Index is an unmanaged index representing the rate of inflation of U.S. consumer prices as determined by the U.S. Department of Labor Statistics. This index reflects non-seasonally adjusted returns. There can be no guarantee that the CPI of other indexes will reflect the exact level of inflation at any given time.

An investor cannot invest directly in an index. Comparison to the indices are for illustrative purposes only. Index returns do not reflect transactions costs, investment management fees or other commissions, fees and expenses that would reduce performance for an investor. The Fund does not include outperformance of any index or benchmark in its investment objectives.

³ Bloomberg Barclays US Universal Bond Index. ⁴ Excluding Interest Only/Principal Only. ⁵ Yield to Worst is presented gross of fees and reflects the lowest possible yield on a callable bond without the issuer defaulting. It does not represent the yield an investor should expect to receive. ⁶ The SEC Yield calculation is an annualized measure of the Fund's dividend and interest payments for the last 30 days, less Fund expenses. Subsidized yield reflects fee waivers and/or expense reimbursements during the period. Without waivers and/or reimbursements, yields would be reduced. Unsubsidized yield does not adjust for any fee waivers and/or expense reimbursements in effect. The SEC Yield calculation is based on the price of the Fund at the beginning of the month.

⁷ As of most recent Annual/Semi-Annual report. ⁸ The Barclays Capital Family of Indices ratings rules use the median if more than two ratings are available. Lower of the two is used if only two ratings are available.

Fund Risks

Investments, including investments in mutual funds, carry risks and investors may lose principal value. Capital markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. The Fund may purchase foreign securities, which are subject to interest rate, currency exchange rate, economic and political risks. The securities of smaller, less well-known companies can be more volatile than those of larger companies.

The return of principal in a bond fund is not guaranteed. Bond funds have the same issuer, interest rate, inflation and credit risks that are associated with underlying bonds owned by the fund. Lower rated bonds, convertible securities and other types of debt obligations involve greater risks than higher rated bonds.

Interest rate risk is when interest rates go up, the value of fixed income securities, such as bonds, typically go down and investors may lose principal value. Credit risk is the risk of loss of principle due to the issuer's failure to repay a loan. Generally, the lower the quality rating of a security, the greater the risk that the issuer will fail to pay interest fully and return principal in a timely manner. If an issuer defaults the security may lose some or all its value.

Mortgage securities, collateralized mortgage obligations (CMO), collateralized debt obligations (CDO), which include collateralized loan (CLO) and collateralized bond obligations (CBO), and similarly structured securities are subject to interest rate, prepayment, and default risks on the underlying mortgages, loans, bonds or other assets; such derivatives may increase volatility. Convertible securities are generally not investment grade and are subject to greater credit risk than higher-rated investments. High yield securities can be volatile and are subject to much higher instances of default.

Value style investing presents the risk that the holdings or securities may never reach their full market value because the market fails to recognize what the portfolio management team considers the true business value or because the portfolio management team has misjudged those values. In addition, value style investing may fall out of favor and underperform growth or other styles of investing during given periods. Please refer to the Fund's Prospectus for a complete overview of the primary risks associated with the Fund.

Portfolio composition will change due to ongoing management of the Fund. Morningstar Rating™

Morningstar Category: Nontraditional Bond

Morningstar Rating™ and Category Rank % based on a Morningstar Risk-Adjusted Return.

	Morningstar Rating™	Morningstar Category Rank %	Funds in Category	Morningstar Return vs Category	Morningstar Risk vs. Category
1-Year	N/A	81	351	N/A	N/A

Morningstar Rating™ as of June 30, 2021; Quantitative Rating as of May 31, 2021.

IMPORTANT INFORMATION

Morningstar Nontraditional Bond Category contains funds that pursue strategies divergent in one or more ways from conventional practice in the broader bond-fund universe. Many funds in this group describe themselves as “absolute return” portfolios, which seek to avoid losses and produce returns uncorrelated with the overall bond market; they employ a variety of methods to achieve those aims.

Morningstar Rating™: For each fund with at least a three-year history, Morningstar calculates a Morningstar Rating™ based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund’s monthly performance (including the effects of sales charges, loads, and redemption fees), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. (Each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages.) The Overall Morningstar Rating™ for a fund is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. Please refer to Important Information section for further disclosures.

Morningstar Return Rating is an annualized measure of a fund’s load-adjusted excess return relative to the return of the 90-day Treasury Bill over a three-, five-, or ten-year period. This is a component of the Morningstar Risk-Adjusted Return. This is derived directly from Morningstar Return. In each Morningstar Category, the top 10% of investments earn a High rating, the next 22.5% Above Average, the middle 35% Average, the next 22.5% Below Average, and the bottom 10% Low. Investments with less than three years of performance history are not rated.

Morningstar Risk Rating is a proprietary Morningstar data point. An assessment of the variations in a fund’s monthly returns, with an emphasis on downside variations, in comparison to similar funds. In each Morningstar Category, the 10% of funds with the lowest measured risk are described as Low Risk, the next 22.5% Below Average, the middle 35% Average, the next 22.5% Above Average, and the top 10% High. Morningstar Risk is measured for up to three time periods (three, five, and 10 years). These separate measures are then weighted and averaged to produce an overall measure for the fund. Funds with less than three years of performance history are not rated.

Morningstar Quantitative Rating™ consists of: (i) Morningstar Quantitative Rating (overall score), (ii) Quantitative Parent pillar, (iii) Quantitative People pillar, and (iv) Quantitative Process pillar (collectively the “Quantitative Fund Ratings”). The Quantitative Fund Ratings are calculated monthly and derived from the analyst-driven ratings of a fund’s peers as determined by statistical algorithms. Morningstar, Inc. calculates Quantitative Fund Ratings for funds when an analyst rating does not exist as part of its qualitative coverage.

Morningstar Quantitative Rating™: Intended to be comparable to Morningstar’s Analyst Ratings for open-end funds and ETFs, which is the summary expression of Morningstar’s forward-looking analysis of a fund. The Morningstar Analyst Rating is based on the analyst’s conviction in the fund’s ability to outperform its peer group and/or relevant benchmark on a risk-adjusted basis over a full market cycle of at least 5 years. Ratings are assigned on a five-tier scale with three positive ratings of Gold, Silver, and Bronze, a Neutral rating, and a Negative rating. Morningstar calculates the Morningstar Quantitative Rating using a statistical model derived from the Morningstar Analyst Rating our fund analysts assign to open-end funds and ETFs. Please go to <https://shareholders.morningstar.com/investor-relations/governance/Compliance--Disclosure/default.aspx> for information about Morningstar Analyst Rating Morningstar’s fund analysts assign to funds.

Quantitative Parent pillar: Intended to be comparable to Morningstar’s Parent pillar scores, which provides Morningstar’s analyst opinion on the stewardship quality of a firm. Morningstar calculates the Quantitative Parent pillar using an algorithm designed to predict the Parent Pillar score our fund analysts would assign to the fund. The quantitative pillar rating is expressed in both a rating and a numerical value as High (5), Above Average (4), Average (3), Below Average (2), Low (1).

Quantitative People pillar: Intended to be comparable to Morningstar’s People pillar scores, which provides Morningstar’s analyst opinion on the fund manager’s talent, tenure, and resources. Morningstar calculates the Quantitative People pillar using an algorithm designed to predict the People pillar score our fund analysts would assign to the fund. The quantitative pillar rating is expressed in both a rating and a numerical value as High (5), Above Average (4), Average (3), Below Average (2), Low (1).

Quantitative Process Pillar: Intended to be comparable to Morningstar’s Process pillar scores, which provides Morningstar’s analyst opinion on the fund’s strategy and whether the management has a competitive advantage enabling it to execute the process and consistently over time. Morningstar calculates the Quantitative Process pillar using an algorithm designed to predict the Process pillar score our fund analysts would assign to the fund. The quantitative pillar rating is expressed in both a rating and a numerical value as High (5), Above Average (4), Average (3), Below Average (2), and Low (1).

Morningstar Quantitative Ratings have not been made available to the issuer of the security prior to publication. Risk Warning: The quantitative fund ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative fund ratings. In addition, there is the risk that the return target will not be met due to such things as unforeseen changes in changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions. A change in the fundamental factors underlying the quantitative fund ratings can mean that the recommendation is subsequently no longer accurate.

For more information about Morningstar’s quantitative methodology, please visit <https://shareholders.morningstar.com/investor-relations/governance/Compliance--Disclosure/default.aspx>.
