

FPA Flexible Fixed Income Fund Third Quarter 2021 Commentary

Not authorized for distribution unless preceded or accompanied by a current prospectus.

Average Annual Total Returns (%)

As of September 30, 2021	Since Inception 12/31/18	1 Year	YTD	QTD
FPA Flexible Fixed Income Fund	3.91	2.94	1.58	0.29
Bloomberg U.S. Universal Bond Index	6.20	0.20	-1.07	0.07
CPI + 200 bps	4.94	7.49	6.38	1.67

Past performance is no guarantee of future results and current performance may be higher or lower than the performance shown. This data represents past performance and investors should understand that investment returns and principal values fluctuate, so that when you redeem your investment it may be worth more or less than its original cost. Current month-end performance data, which may be higher or lower than the performance data quoted, may be obtained at www.fpa.com or by calling toll-free, 1-800-982-4372. As of its most recent prospectus, the Fund's total expense ratio is 0.77% for the Institutional Share Class and 0.87% for the Advisor Share Class and net expense ratio is 0.49% for the Institutional Class and 0.59% for the Advisor Class.

The FPA Flexible Fixed Income Fund ("Fund") performance is calculated on a total return basis which includes reinvestment of all distributions and is net of all fees and expenses. Fund returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or the redemption of Fund shares, which would lower these figures. Comparison to any index is for illustrative purposes only. The Fund does not include outperformance of any index or benchmark in its investment objectives. An investor cannot invest directly in an index.

The Total Annual Fund Operating Expenses before reimbursement is 0.77% for the Institutional Share Class and 0.87% for the Advisor Share Class (as of most recent prospectus). First Pacific Advisors, LP (the "Adviser" or "FPA"), the Fund's investment adviser, has contractually agreed to reimburse the Fund for Total Annual Fund Operating Expenses (excluding interest, taxes, brokerage fees and commissions payable by the Fund in connection with the purchase or sale of portfolio securities, redemption liquidity service expenses, and extraordinary expenses, including litigation expenses not incurred in the Fund's ordinary course of business) in excess of 0.49% of the average net assets of the Fund attributable to the Institutional Class and 0.59% of the average net assets of the Fund attributable to the Advisor Class for the period ending April 30, 2022, and in excess of 0.59% of the average net assets of the Fund attributable to the Institutional Class and 0.69% of the average the net assets of the Fund attributable to the Advisor Class for the one-year period ending April 30, 2023. During the term of the current expense limit agreement, beginning April 16, 2021 and ending April 30, 2023, any expenses reimbursed to the Fund by FPA during any of the previous 36 months may be recouped by FPA, provided the Fund's Total Annual Fund Operating Expenses do not exceed the then-applicable expense limit. Beginning May 1, 2023, any expenses reimbursed to the Fund by FPA during any of the previous 36 months may be recouped by FPA, provided the Fund's Total Annual Fund Operating Expenses do not exceed 0.64% of the average net assets of the Fund attributable to the Institutional Class and 0.74% of the average net assets of the Fund attributable to the Advisor Class for any subsequent calendar year, regardless of whether there is a then-effective higher expense limit. This agreement may only be terminated earlier by the Fund's Board of Trustees (the "Board") or upon termination of the Advisory Agreement.

You should consider the Fund's investment objectives, risks, and charges and expenses carefully before you invest. The Prospectus details the Fund's objective and policies, charges, and other matters of interest to the prospective investor. Please read the Prospectus carefully before investing. The Prospectus may be obtained by visiting the website at www.fpa.com, by email at crm@fpa.com, toll-free by calling 1-800-982-4372 or by contacting the Fund in writing.

Please see important disclosures at the end of this update.

FPA Flexible Fixed Income Fund

Third Quarter 2021 Commentary

Introduction

Dear Fellow Shareholders,

FPA Flexible Fixed Income Fund (the “Fund”) returned 0.29% in the third quarter of 2021 and 1.58% year-to-date.

As of Sept. 30, 2021, the portfolio had a yield-to-worst¹ of 1.63% and an effective duration of 0.74 years. During the quarter, Treasury yields rose for one- to 10-year maturity bonds and declined for longer maturities as the yield curve flattened, driven by strong inflation data and expectations of tighter monetary policy. Recent commentary from the Federal Reserve suggests that the central bank may begin tapering asset purchases in November 2021 and may raise the Fed Funds rate more aggressively than previously anticipated, beginning with potentially one or more Fed Funds rate increases in 2022.² Despite the Fed’s commentary, there remains uncertainty regarding the persistence of recent economic growth and inflation. On an absolute basis, the fixed income market is slightly more attractive owing to higher yields but the higher yields are due to higher risk-free rates while credit spreads in both investment grade and high yield-rated debt are not meaningfully changed from their historically low levels. Though absolute yields are higher, historically high duration in the fixed income market coupled with the seeming inevitability of higher interest rates leaves fixed income investors exposed to inordinately high mark-to-market risk associated with short-term changes in yields. On the whole, due to an unattractive yield environment offering insufficient compensation for credit and/or duration risk, the investment opportunity set is limited. As such, while we continue to search for credit investments (rated BBB or lower) that offer attractive risk-adjusted returns, absent those investments, we will deploy capital into high quality investments or retain cash for use in the future when better opportunities appear. The Fund’s credit exposure (investments rated BBB or lower) was unchanged at 23.7% as of September 30, 2021. Cash and equivalents increased from 10.5% of the portfolio as of June 30, 2021 to 13.7% on September 30, 2021.

Portfolio Attribution³

The largest, second largest and third largest contributors to performance during the quarter were corporate loan-backed collateralized loan obligations (CLOs), the corporate holdings sector (corporate bonds, bank debt and equity) and asset-backed securities (ABS) backed by loans to late stage, mostly software companies, respectively. The return on all three was mostly due to coupon payments.

At the sector level, there were no meaningful detractors from performance though there were individual investments in some sectors that detracted from performance.

¹ Yield to Worst (“YTW”) is presented gross of fees and reflects the lowest possible yield on a callable bond without the issuer defaulting. It does not represent the yield an investor should expect to receive. As of September 30, 2021, the Fund’s subsidized/unsubsidized 30-day SEC standardized yield (“SEC Yield”) was 1.54%/1.36% respectively. The SEC Yield calculation is an annualized measure of the Fund’s dividend and interest payments for the last 30 days, less the Fund expenses. Subsidized yield reflects fee waivers and/or expense reimbursements during the period. Without waivers and/or reimbursements, yields would be reduced. Unsubsidized yield does not adjust for any fee waivers and/or expense reimbursements in effect. The SEC Yield calculation shows investors what they would earn in yield over the course of a 12-month period if the fund continued earning the same rate for the rest of the year.

Portfolio Activity

The table below shows the portfolio's sector level exposures as of June 30, 2021 compared to September 30, 2021:

Sector	% Portfolio 9/30/2021	% Portfolio 6/30/2021
ABS	62.8	63.6
Mortgage Backed (CMO) ⁴	5.6	7.4
Stripped Mortgage-backed	0.3	0.3
Corporate	7.0	7.4
CMBS ⁴	10.6	10.7
Mortgage Pass-through	0.0	0.1
Cash and equivalents	13.7	10.5
Total	100.0	100.0
Yield-to-worst ⁵	1.63%	1.68%
Effective Duration (years)	0.74	0.84
Average Life (years)	1.51	1.48

As discussed in more detail below, bond yields rose slightly during the quarter, primarily due to higher Treasury yields as credit spreads did not change meaningfully. Consequently, bonds were slightly cheaper on an absolute basis but there remains little compensation for credit and/or duration risk. Nevertheless, our hunt for attractively priced credit investments continued and we were able to find a few during the quarter. Approximately a third of our investments this quarter were in credit and included lower-rated tranches of CLOs backed by corporate loans; bank debt; ABS backed by loans to late stage, mostly software, companies; newly issued bonds backed by non-performing residential mortgages; and commercial mortgage backed securities backed by data centers. In the absence of attractive credit opportunities, the Fund will retain cash or invest in high quality, liquid assets. This past quarter, due to the expensive market, our high quality investments were short duration and included ABS backed by subprime or prime auto loans, CLOs backed by corporate loans, CLOs backed by commercial real estate loans, and equipment ABS. The Fund's investments were funded with a combination of cash and proceeds from repayments of existing investments, including a number of credit investments which were called prior to maturity as issuers took advantage of the low yield and spread environment to refinance debt on terms more attractive to them. The Fund's credit exposure was unchanged at 23.7% as of Sept. 30, 2021.

Market Commentary

Inflation has risen to the top of the market's consciousness in the past few months, and for good reason. The highest inflation in 20 years continued as evidenced by the following chart, which shows that inflation less food and energy remains elevated, with prices rising 4% year-over-year in September. For reference, headline inflation including food and energy rose 5.4% on the same basis.

⁴ Collateralized mortgage obligations ("CMO") are mortgage-backed bonds that separate mortgage pools into different maturity classes. Commercial mortgage-backed securities ("CMBS") are securities backed by commercial mortgages rather than residential mortgages.

⁵ Please see Footnote 1 for definition of yield-to-worst and for the Fund's subsidized and unsubsidized SEC Yield as of June 30, 2021.

Past performance is no guarantee, nor is it indicative, of future results.

CPI Urban Consumers less Food and Energy

Source: Bureau of Labor Statistics. Chart data thru September 30, 2021. The "Consumer Price Index for All Urban Consumers: All Items Less Food & Energy" is an aggregate of prices paid by urban consumers for a typical basket of goods, excluding food and energy. This measurement, known as "Core CPI," is widely used by economists because food and energy have very volatile prices. The all urban consumer group represents about 93 percent of the total U.S. population. It is based on the expenditures of almost all residents of urban or metropolitan areas, including professionals, the self-employed, the unemployed, and retired people, as well as urban wage earners and clerical workers. Not included in the CPI are the spending patterns of people living in rural nonmetropolitan areas, those in farm households, people in the Armed Forces, and those in institutions, such as prisons and mental hospitals.

While the party line from the Federal Reserve remains that this period of high inflation (high relative to the goal of average inflation of 2%) is temporary, Federal Reserve Chairman Jerome Powell acknowledged that the supply bottlenecks that have contributed to inflation have been larger and lasted longer than anticipated and that there is upside risk to inflation.⁶ With that backdrop, the Fed has recently been guiding toward a tapering process that could commence this year, perhaps as soon as November, and end in the middle of 2022. Further, the Fed's dot plots suggest greater support within the Fed for one or more increases in the Fed Funds rate in 2022.

The consequence of this commentary and guidance has been higher Treasury yields. The chart below shows the Treasury yield curve at the end of June and the end of September:

⁶ Source: U.S. Federal Reserve (<https://www.federalreserve.gov/mediacenter/files/FOMCpresconf20210922.pdf>.)

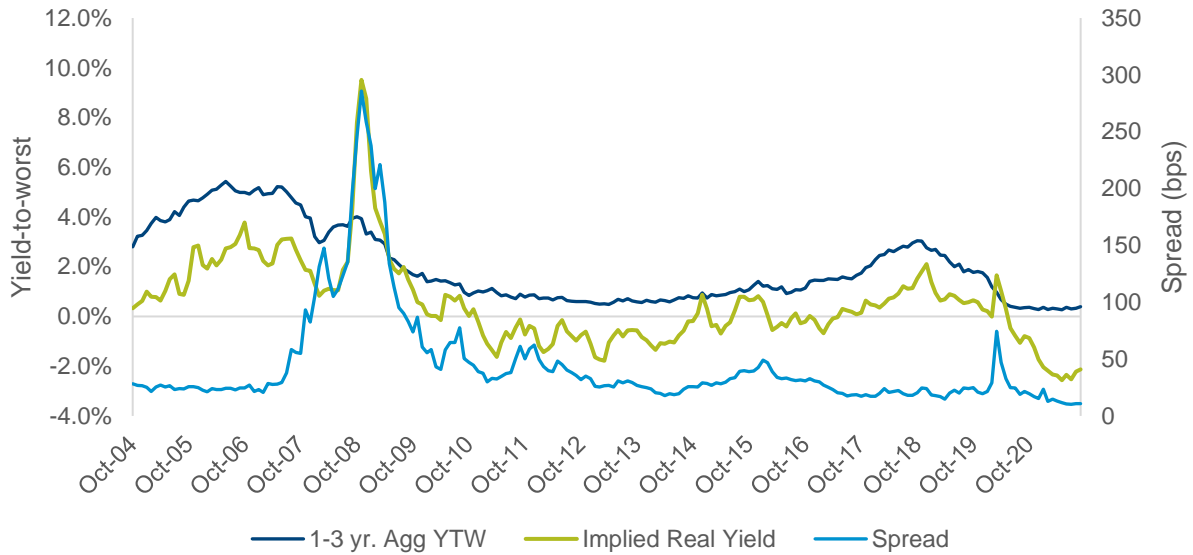

Source: Bloomberg. Chart data as of the dates shown.

During the past quarter, Treasury yields rose by three to eight basis points for three- to 10-year maturity bonds and declined elsewhere along the curve. We consider this to be significant relative to where yields have been recently, but not significant on an absolute basis.

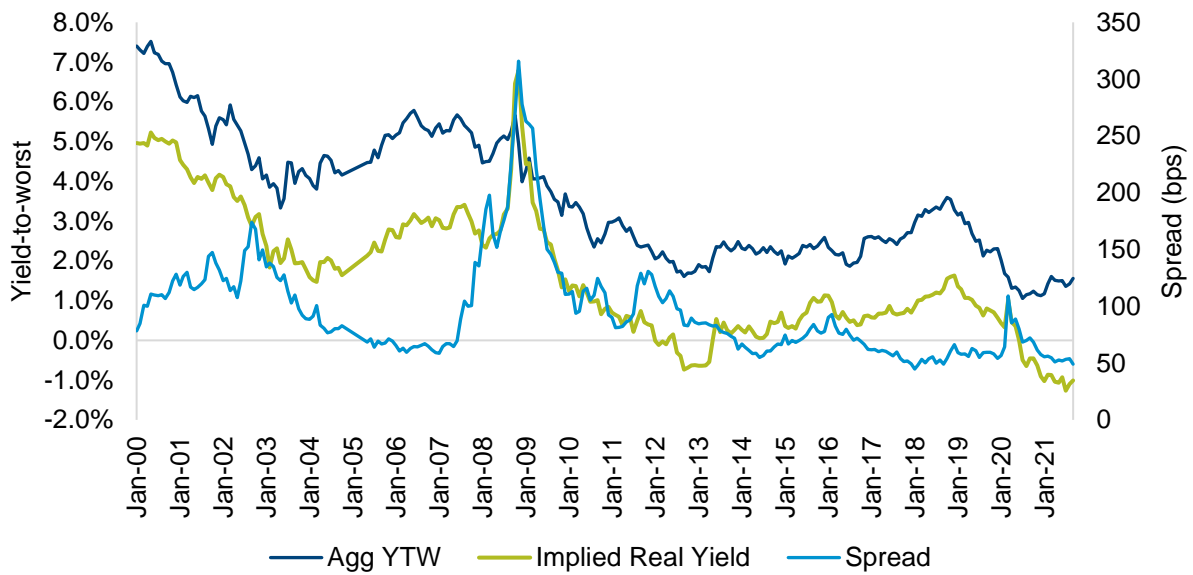

Slightly higher risk-free rates have filtered through to investment-grade debt, both short and long duration. Unfortunately, because spreads have not changed meaningfully, overall yields are still very low. Moreover, after netting out expected inflation, real yields are still significantly negative, as shown in the charts below.

Bloomberg U.S. 1-3 Year Aggregate Bond Index

Source: Bloomberg. Chart data is as of September 30, 2021. YTW is Yield-to-Worst. Implied Real Yield is an interest rate that has been adjusted to remove the effects of inflation to reflect the real cost of funds to the borrower and the real yield to the lender or to an investor. Spread refers to the difference in overall returns between two different classes of securities, or returns from the same class, but different representative securities. Please refer to the end of the presentation for Important Disclosures and Glossary of Terms.

Bloomberg U.S. Aggregate Bond Index

Source: Bloomberg. Chart data is as of September 30, 2021. YTW is Yield-to-Worst. Implied Real Yield is an interest rate that has been adjusted to remove the effects of inflation to reflect the real cost of funds to the borrower and the real yield to the lender or to an investor. Spread refers to the difference in overall returns between two different classes of securities, or returns from the same class, but different representative securities. Please refer to the end of the presentation for Important Disclosures and Glossary of Terms.

In high-yield debt, spreads have also not changed much, resulting in higher but not “high” yields that leave little real return to compensate for credit risk. The chart below shows this data, focusing on the BB component of the high-yield index excluding energy to adjust for composition changes within the index over time.

Bloomberg U.S. High Yield BB excl. Energy

Source: Bloomberg. Chart data is as of September 30, 2021. YTW is Yield-to-Worst. Implied Real Yield is an interest rate that has been adjusted to remove the effects of inflation to reflect the real cost of funds to the borrower and the real yield to the lender or to an investor. High-yield bonds are bonds that pay higher interest rates because they have lower credit ratings than investment-grade bonds. Spread refers to the difference in overall returns between two different classes of securities, or returns from the same class, but different representative securities. Please refer to the end of the presentation for Important Disclosures and Glossary of Terms.

With higher yields on the horizon, investors today are not well-compensated for short-term market-to-market risk associated with rising interest rates. Using the Bloomberg U.S. Aggregate Bond Index as a proxy for the investment grade bond market, yields have only increased by approximately six basis points but the duration on the index has actually increased over the past few months, mostly owing to an increase in duration in the mortgage market. As a result, the compensation per unit of duration has barely moved. The ratio of yield to duration is a simple way to measure the magnitude of yield increases and, thus, the price declines that bonds can sustain before producing a negative return. A lower ratio means that bonds are less protected from rising yields. Despite higher yields, this ratio for the Aggregate Bond Index is not far off its historical low.

Bloomberg U.S. Aggregate Bond Index

Source: Bloomberg. Chart data through September 30, 2021. YTW is Yield to Worst. Duration is a measure of the sensitivity of the price of a bond or other debt instrument to a change in interest rates. The higher the YTW/Duration, the less exposure to interest rate risk.

Similarly, even in short-duration investment grade bonds, the compensation per unit of duration has barely changed despite higher yields and it remains mired near historical lows.

Bloomberg U.S. 1-3 Year Aggregate Bond Index

Source: Bloomberg. Chart data through September 30, 2021. YTW is Yield to Worst. Duration is a measure of the sensitivity of the price of a bond or other debt instrument to a change in interest rates. The higher the YTW/Duration, the less exposure to interest rate risk.

These indices suggest that, by and large, the bond market does not offer a safe harbor against rising rates and inflation. To the extent that investors are concerned about the risk of inflation and rising interest rates, rest assured that the Fund is actively managed in an effort to protect our investors from these risks.

Inflation is a popular topic these days, but the Fund is rare in that the pursuit of a positive real return (i.e., outperforming inflation) has explicitly been a part of its goals since inception. The Fund is managed with the two objectives of seeking (a) a positive return on a rolling three-year basis and (b) a real return of CPI+200 basis points over a rolling five-year period. For much of the past decade, the real yield on high-quality bonds has been negative as a result of Federal Reserve policies that have included long periods of

zero Fed Funds rates and quantitative easing. When real yields are negative, rather than reach for yield in an attempt to earn CPI+200 bps over the long-term, our preference is to focus on the positive absolute returns in the short-term. That focus is particularly valuable in protecting capital during periods of higher inflation. It also provides the flexibility to reinvest into higher yields in a rising yield environment rather than be burdened with mark-to-market losses on existing positions. We believe prioritizing preservation of capital on an absolute basis in the near-term maximizes the multi-year long-term return potential in a rising interest rate environment, whether rates are rising due to escalating inflation or rising real yields.

In today's environment, we believe the Fund is well-positioned on an absolute basis and better positioned than alternatives on a relative basis for a period of rising yields, whether induced by inflation and/or tighter monetary policy. The portfolio's duration is short and generally offers more yield than the comparable indices and more yield per unit of duration than its peers.⁷

	Yield	Duration	Yield/Duration Ratio
FPA Flexible Fixed Income	1.63%	0.74 yrs.	2.20
Bloomberg U.S. Aggregate Bond Index	1.56%	6.6 yrs.	0.24
Bloomberg U.S. 1-3 Year Aggregate Bond Index	0.39%	1.8 yrs.	0.21
Bloomberg U.S. Universal Bond Index	1.89%	6.5 yrs.	0.29
Morningstar Nontraditional Bond Category	4.22%	1.96 yrs.	2.15

As of September 30, 2021. Source: Morningstar Direct.

The back-of-the-envelope math implied by the ratios in the table above suggests that the Bloomberg U.S. Aggregate Bond Index, Bloomberg U.S. 1-3 Year Aggregate Bond Index, and Bloomberg U.S. Universal Index could only withstand an approximate 20-30 bps increase in yield over the next 12 months before producing a negative 12-month return. In addition, we expect the Fund to benefit from having approximately a third of its portfolio comprised of floating-rate bonds. If short-term interest rates increase, these floating rate bonds may enhance the portfolio's return via higher coupon payments and less price sensitivity to changing yields.

Debt markets were already expensive, generally offering inadequate compensation for credit risk or mark-to-market risk associated with changes in interest rates. The potential persistence of inflation and prospect of a near-term tightening of monetary policy introduce additional elements of uncertainty yet we believe investors are still not paid enough to bear these risks. We have always managed the Fund in a manner that protects against uncertainty, particularly uncertainty that creates downside risk. Specifically, protecting against rising yields – whether via inflation or otherwise – has always been part of the strategy. The Fund's flexible mandate and focus on absolute return allows us to actively manage the Fund's exposure to interest rate risk (i.e., duration) such that we are compensated when the downside scenario of rising yields occurs. To accomplish this, we shorten duration when yields are lower and lengthen duration when yields are higher. Importantly, these duration adjustments are made as yields change, not in anticipation of changing yields. In other words, we do not speculate on the direction and timing of changes in interest rates. With yields still near historical lows, we are investing opportunistically, patiently waiting for attractive investments and focusing on preserving capital while we wait.

As always, we are very appreciative of our clients' support and for entrusting us with a portion of their hard-earned capital.

Respectfully submitted,

Thomas H. Atteberry

Any such offer or solicitation shall only be made pursuant to the Fund's Prospectus, which supersedes the information contained herein in its entirety.

The views expressed herein and any forward-looking statements are as of the date of the publication and are those of the portfolio management team. Future events or results may vary significantly from those expressed and are subject to change at any time in response to changing circumstances and industry developments. This information and data have been prepared from sources believed reliable, but the accuracy and completeness of the information cannot be guaranteed and is not a complete summary or statement of all available data. You should not construe the contents of this document as legal, tax, accounting, investment or other advice or recommendations.

Portfolio composition will change due to ongoing management of the Fund. References to individual securities or sectors are for informational purposes only and should not be construed as recommendations by the Fund, the portfolio managers, the Adviser, or the distributor. It should not be assumed that future investments will be profitable or will equal the performance of the security or sector examples discussed. The portfolio holdings as of the most recent quarter-end may be obtained at www.fpa.com.

The statements made herein may be forward-looking and/or based on current expectations, projections, and/or information currently available. Actual results may differ from those anticipated. The portfolio managers and/or FPA cannot assure future results and disclaims any obligation to update or alter any statistical data and/or references thereto, as well as any forward-looking statements, whether as a result of new information, future events, or otherwise. Such statements may or may not be accurate over the long-term.

Investments, including investments in mutual funds, carry risks and investors may lose principal value. Capital markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. The Fund may purchase foreign securities, including American Depositary Receipts (ADRs) and other depository receipts, which are subject to interest rate, currency exchange rate, economic and political risks; this may be enhanced when investing in emerging markets. Foreign investments, especially those of companies in emerging markets, can be riskier, less liquid, harder to value, and more volatile than investments in the United States. The securities of smaller, less well-known companies can be more volatile than those of larger companies.

The return of principal in a bond fund is not guaranteed. Bond funds have the same issuer, interest rate, inflation and credit risks that are associated with underlying bonds owned by the Fund. Lower rated bonds, convertible securities and other types of debt obligations involve greater risks than higher rated bonds.

Interest rate risk is the risk that when interest rates go up, the value of fixed income instruments, such as bonds, typically go down and investors may lose principal value. Credit risk is the risk of loss of principal due to the issuer's failure to repay a loan. Generally, the lower the quality rating of a fixed income instrument, the greater the risk that the issuer will fail to pay interest fully and return principal in a timely manner. If an issuer defaults the fixed income instrument may lose some or all of its value.

Mortgage securities and collateralized mortgage obligations (CMOs) are subject to prepayment risk and the risk of default on the underlying mortgages or other assets; such derivatives may increase volatility. Convertible securities are generally not investment grade and are subject to greater credit risk than higher-rated investments. High yield securities can be volatile and subject to much higher instances of default.

Collateralized debt obligations ("CDOs"), which include collateralized loan obligations ("CLOs"), collateralized bond obligations ("CBOs"), and other similarly structured securities, carry additional risks in addition to interest rate risk and default risk. This includes, but is not limited to: (i) distributions from the underlying collateral may not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; and (iii) the complex structure of the security may not be fully understood

at the time of investment and may produce disputes with the issuer or unexpected investment results. Investments in CDOs are also more difficult to value than other investments.

Value style investing presents the risk that the holdings or securities may never reach their full market value because the market fails to recognize what the portfolio management team considers the true business value or because the portfolio management team has misjudged those values. In addition, value style investing may fall out of favor and underperform growth or other styles of investing during given periods.

The ratings agencies that provide ratings are Standard and Poor's, Moody's, and Fitch. Credit ratings range from AAA (highest) to D (lowest). Bonds rated BBB or above are considered investment grade. Credit ratings of BB and below are lower-rated securities (junk bonds). High-yielding, non-investment grade bonds (junk bonds) involve higher risks than investment grade bonds. Bonds with credit ratings of CCC or below have high default risk.

Please **refer to the Fund's Prospectus** for a complete overview of the primary risks associated with the Fund.

The Fund is not authorized for distribution unless preceded or accompanied by a current prospectus. The prospectus can be accessed at: <https://fpa.com/request-funds-literature>.

Index / Category Definitions

Comparison to any index is for illustrative purposes only and should not be relied upon as a fully accurate measure of comparison. The Fund will be less diversified than the indices noted herein, and may hold non-index securities or securities that are not comparable to those contained in an index. Indices will hold positions that are not within the Fund's investment strategy. Indices are unmanaged, do not reflect any commissions, fees or expenses which would be incurred by an investor purchasing the underlying securities. The Fund does not include outperformance of any index or benchmark in its investment objectives. Investors cannot invest directly in an index.

Bloomberg US Aggregate Bond Index provides a measure of the performance of the U.S. investment grade bonds market, which includes investment grade U.S. Government bonds, investment grade corporate bonds, mortgage pass-through securities and asset-backed securities that are publicly offered for sale in the United States. The securities in the Index must have at least 1 year remaining in maturity. In addition, the securities must be denominated in U.S. dollars and must be fixed rate, nonconvertible, and taxable.

Bloomberg US Aggregate 1-3 Year Bond Index provides a measure of the performance of the U.S. investment grade bonds market, which includes investment grade U.S. Government bonds, investment grade corporate bonds, mortgage pass-through securities and asset-backed securities that are publicly offered for sale in the United States. The securities in the Index must have a remaining maturity of 1 to 3 years. In addition, the securities must be denominated in U.S. dollars and must be fixed rate, nonconvertible, and taxable.

Bloomberg U.S. High Yield Index measures the market of USD-denominated, non-investment grade, fixed-rate, taxable corporate bonds.

Bloomberg U.S. High Yield Index ex. Energy measures the market of USD-denominated, non-investment grade, fixed-rate, taxable corporate bonds excluding Energy sector.

Bloomberg U.S. Universal Bond Index represents the union of the following Bloomberg Barclay's indices: U.S. Aggregate Index, the U.S. Corporate High-Yield Index, the 144A Index, the Eurodollar Index, the Emerging Markets Index, and the non-ERISA portion of the CMBS Index. Municipal debt, private placements, and non-dollar-denominated issues are excluded from the Universal Index. The only constituent of the index that includes floating-rate debt is the Emerging Markets Index.

The **Consumer Price Index (CPI)** is an unmanaged index representing the rate of the inflation of U.S. consumer prices as determined by the U.S. Department of Labor Statistics. There can be no guarantee that the CPI will reflect the exact level of inflation at any given time. This index reflects non-seasonally adjusted returns.

The **CPI + 200 bps** is created by adding 2% to the annual percentage change in the CPI. This index reflects non-seasonally adjusted returns.

Morningstar Nontraditional Bond Category contains funds that pursue strategies divergent in one or more ways from conventional practice in the broader bond fund universe. Many funds in this group describe themselves as "absolute return" portfolios, which seek to avoid losses and produce returns uncorrelated with the overall bond market; they employ a variety of methods to achieve those aims. Another large subset are self-described "unconstrained" portfolios that have more flexibility to invest tactically across a wide swath of individual sectors, including high yield and foreign debt, and typically with very large allocations. Funds in the latter group typically have broad freedom to manage interest rate sensitivity, but attempt to tactically manage those exposures in order to minimize volatility. The category is also home to a subset of portfolios that attempt to minimize volatility by maintaining short or ultra short duration portfolios, but explicitly court significant credit and foreign bond market risk in order to generate high returns. Funds within this category often will use credit default swaps and other fixed income derivatives to a significant level within their portfolios. There were 360 funds in the category at 9/30/2021.

Other Definitions

Basis Point (bps) is equal to one hundredth of one percent, or 0.01%. 100 basis points = 1%.

Corporate holdings include bank debt, corporate bonds and common stock.

Credit Spread is the difference in yield between a U.S. Treasury bond and another debt security of the same maturity but different credit quality

Effective Duration (years) is the duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change.

Nominal yield is the coupon rate on a bond.

Real yield is the nominal yield of a bond minus the rate of inflation

Repo (Repurchase Agreement) is a form of short-term borrowing for dealers in government securities.

Weighted Average Life (years) is the average length of time that each dollar of unpaid principal on a loan, a mortgage or an amortizing bond remains outstanding.

Yield to Maturity is the rate of return anticipated on a bond if held until the end of its lifetime. YTM is considered a long-term bond yield expressed as an annual rate. The YTM calculation takes into account the bond's current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupon payments are reinvested at the same rate as the bond's current yield.

Portfolio Holding Disclosures

You should consider the FPA Flexible Fixed Income Fund's ("Fund") investment objectives, risks, and charges and expenses carefully before you invest. The Prospectus details the Fund's objective and policies, sales charges, and other matters of interest to the prospective investor. Please read the Prospectus carefully before investing. The Prospectus may be obtained by visiting the website at www.fpa.com, by email at crm@fpa.com, toll-free by calling 1-800-982-4372 or by contacting the Fund in writing.

The Fund's holdings data contained herein is subject to change. Portfolio composition will change due to ongoing management of the Fund. References to individual securities are for informational purposes only and should not be construed as recommendations by the Fund, the portfolio managers, FPA, or the distributor.

Investments, including investments in mutual funds, carry risks and investors may lose principal value. Capital markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. The Fund may purchase foreign securities, including American Depositary Receipts (ADRs) and other depository receipts, which are subject to interest rate, currency exchange rate, economic and political risks; this may be enhanced when investing in emerging markets. Securities of smaller, less well-known companies involve greater risks and they can fluctuate in price more than larger company securities. You risk paying more for a security than you received from its sale.

The return of principal in a bond investment is not guaranteed. Bonds have issuer, interest rate, inflation and credit risks. Interest rate risk is when interest rates go up, the value of fixed income securities, such as bonds, typically go down and investors may lose principal value. Credit risk is the risk of loss of principle due to the issuer's failure to repay a loan. Generally, the lower the quality rating of a security, the greater the risk that the issuer will fail to pay interest fully and return principal in a timely manner. If an issuer defaults the security may lose some or all its value. Lower rated bonds, callable bonds and other types of debt obligations involve greater risks. Mortgage securities, collateralized mortgage obligations (CMOs), and asset backed securities are subject to prepayment risk and the risk of default on the underlying mortgages or other assets; such derivatives may increase volatility. These securities can also be highly sensitive to changes in interest rates. Convertible securities are generally not investment grade and are subject to greater credit risk than higher-rated investments. High yield securities can be volatile and subject to much higher instances of default. The Fund may experience increased costs, losses and delays in liquidating underlying securities should the seller of a repurchase agreement declare bankruptcy or default.

The ratings agencies that provide ratings are Standard and Poor's ("S&P"), Fitch, and Moody's. Credit ratings range from AAA (highest) to D (lowest). Bonds rated BBB or above are considered investment grade. Credit ratings of BB and below are lower-rated securities (junk bonds). High-yielding, non-investment grade bonds (junk bonds) involve higher risks than investment grade bonds. Bonds with credit ratings of CCC/Caa or below have high default risk.

Collateralized debt obligations ("CDOs"), which include collateralized loan obligations ("CLOs"), collateralized bond obligations ("CBOs"), and other similarly structured securities, carry additional risks in addition to interest rate risk and default risk. This includes, but is not limited to: (i) distributions from the underlying collateral may not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; and (iii) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results. Investments in CDOs are also more difficult to value than other investments.

Value style investing presents the risk that the holdings or securities may never reach their full market value because the market fails to recognize what the portfolio management team considers the true business value or because the portfolio management team has misjudged those values. In addition, value style investing may fall out of favor and underperform growth or other styles of investing during given periods.

Please refer to the Fund's Prospectus for a complete overview of the primary risks associated with the Fund.
